Q.1 What is data Analysis?

→ It is the process of collecting, cleaning and analyzing data to find pattern and useful information.

Q.2 machine learning problem statement (Churn prediction)

→ The objective is to build a machine learning model that predict whether customer will churn based on their behavior.

Q.3 Steps to plan data science project

- Define the problem
- Collect data
- clean and preprocess data
- perform exploratory data analysis
- build and train the model
- evaluate the model
- Deploy and monitor the solution

Q. What is tensor?

→ It is multi dimensional array used to store the process data in machine learning and deep learning.
